linkedin.com/in/kevinsylvester6642 | github.com/Sylvo6642 | kevinsylvester.xyz

PROFESSIONAL SUMMARY

Full stack developer with 3 years of experience building production ERP platforms, web applications and AI powered products. Works day to day across Python, Django, Angular and MongoDB, and builds products in React, TypeScript, Next.js and Supabase. Builds LLM features with RAG, tool calling agents and structured output pipelines across Anthropic, OpenAI and Google Gemini, with schema validation, fallbacks and usage limits around every model call. Proven results in database query optimization, API security hardening and payment gateway integration.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS
Frontend: Angular, React, Next.js, Tailwind CSS, SASS, shadcn/ui, Zustand, Framer Motion, Vite
Backend: Django, Django REST Framework, Python, Node.js, NestJS, Express, RESTful API design
Databases: MongoDB, PostgreSQL, MySQL, Supabase, Redis, aggregation pipelines, indexing, query optimization
AI and LLM: RAG, AI agents, tool calling, structured outputs, prompt engineering, Weaviate, Pinecone, Vercel AI SDK, Hugging Face Transformers, Anthropic Claude API, OpenAI API, Google Gemini API, Claude Code, MCP servers
Cloud and DevOps: AWS, AWS S3, Docker, Git, Bitbucket, Supabase Edge Functions, serverless functions
Security: JWT, OAuth 2.0, AES-256-GCM, PBKDF2, HMAC, role based access control, API hardening
Payments and Integrations: Stripe, Razorpay, PayPal, Resend, webhook handling
Web Performance: SEO, Core Web Vitals, Lighthouse, server side rendering

PROFESSIONAL EXPERIENCE

Software Developer

Indeeya (Lidex Tech), Kozhikode, Kerala, India | 06/2024 to Present

- Designed and implemented multistep ERP approval workflows with role based access control and real time badge count systems across Django and MongoDB backends.
- Improved MongoDB query execution time by approximately 60 percent through targeted indexing and restructured aggregation pipelines in a production ERP system.
- Automated inventory label generation with thread safe atomic counters, QR code embedding and ReportLab PDF rendering, cutting bulk generation from 50 to 60 seconds down to 150 to 200 milliseconds.
- Built resource and reporting dashboards backed by aggregation pipelines, eliminating N+1 query patterns and surfacing utilization data through Angular visualizations.
- Identified, patched and verified critical API security vulnerabilities across production endpoints.
- Integrated payment gateways and third party APIs into ERP workflows, enabling automated data exchange and reducing manual operational effort across departments.
- Mentored interns on Angular, MongoDB aggregation pipelines and Python.

Software Developer Intern

Techolas Technologies, Kozhikode, Kerala, India | 01/2023 to 09/2023

- Built full stack web applications with Python, Django and Flask backends paired with React frontends.
- Designed and developed RESTful APIs connecting frontend clients to backend services.

PROJECTS

Clausify, AI Contract Analysis SaaS

kevinsylvester.xyz/projects/Clausify

Stack: React, TypeScript, Supabase, PostgreSQL, Razorpay, Google Gemini API, Tailwind CSS, shadcn/ui

- Built a SaaS that analyzes contracts and flags risky clauses in plain English, with prompts tailored to occupation, jurisdiction, detail level and report language.

- Integrated Gemini 2.0 Flash through prompt engineering and schema constrained structured output pipelines served via Supabase Edge Functions, with automated PDF report generation.
- Built a quota enforced subscription system across Pro and Team tiers using Razorpay webhooks and PostgreSQL RPC to gate AI feature access by plan limit.
- Implemented full authentication covering Google OAuth, magic link, email and password, HMAC password reset and per device session tracking.
- Delivered transactional email flows for invitations, receipts and verification through Resend, plus metadata, sitemap and structured data for search.

Ask AI Kevin, Portfolio Chat Assistant
kevinsylvester.xyz
Stack: Vercel AI SDK, OpenAI API, Zod, Supabase, React, Serverless Functions

- Built a tool calling chat agent grounded in a structured portfolio profile that streams answers to recruiter questions.
- Defined six Zod typed tools that render projects, experience, skills, contact and resume cards or draft a contact message.
- Enforced rate limits per browser, per hashed IP and site wide in Supabase, capping daily model spend.
- Wrote an evaluation suite that checks grounded facts, refusals on private topics and correct tool use.

CommitGrid, Open Source React Component
npmjs.com/package/commitgrid | github.com/Sylvo6642/CommitGrid
Stack: React, TypeScript, Framer Motion, tsup, npm

- Published an animated GitHub style contribution heatmap for React on npm, with spring scale entry, a count up total and a live ping on the current day.
- Made it themeable from a five step color scale or a single seed color, shipped as a typed package bundled with tsup.

Void Vault, Encrypted Cloud Storage
kevinsylvester.xyz/projects/VoidVault
Stack: Next.js, Node.js, Express, MongoDB, Discord.js, AES-256-GCM, JWT

- Engineered dual layer AES-256-GCM encryption, applied client side via PBKDF2 then again server side, before splitting files into 25MB chunks distributed in parallel across up to 5 Discord bot backends.
- Secured authentication with JWT, silent refresh, HttpOnly cookies and Google OAuth, plus shareable links with configurable expiry and password protection.
- Built a complete file manager for upload, browse, download, rename and delete, with metadata in MongoDB.

Skill Dash, Services Marketplace
kevinsylvester.xyz/projects/SkillDash
Stack: React, Vite, Tailwind CSS, Zustand, Supabase, PostgreSQL, Framer Motion, Leaflet

- Built a dual role marketplace connecting customers with skilled manual labor workers, featuring live job tracking through Supabase Realtime and location mapping through Leaflet and Google Maps.
- Implemented phone OTP and email authentication alongside Edge Functions handling payment release, worker rating updates and notification fan out.
- Designed a PostgreSQL schema with row level security, authentication triggers, auto provisioning profiles and a 16 migration history covering payments, messaging and chat attachments.

EDUCATION

Bachelor of Computer Applications (BCA)
St. Xavier's Arts and Science College, Kozhikode, Kerala, India | 2019 to 2022

Higher Secondary Certificate, Commerce
St. Joseph's Boys Higher Secondary School, Kozhikode, Kerala, India | 2019

CERTIFICATIONS AND TRAINING

AI Engineering, Coursera, 2025 to Present
ChatGPT Prompt Engineering for Developers, DeepLearning.AI and OpenAI, 2025
Python Full Stack Development, Techolas Technologies, 2023
CICSA Certified Analyst, Red Team Hacker Academy, 2022
